PATIENT IMPACT

"A 65-year-old male patient came to the clinic struggling to keep his blood pressure under control and unable to check his readings at home. Our provider saw the patient and educated him on the proper way to measure blood pressure at home and provided a home monitoring device to capture his readings at home after taking the medications prescribed. He returned 2 weeks later with a notebook containing weekly readings that allowed our provided to adjust his medication dose and brought his measurements under normal limits."
